

Completed

Figure out the behavioral tests and tasks for each group

Figure out the data storage and organization on BIDs

Write a description for the psycholinguistic properties of the lexical data

Write a description for the directories hierarchy for data storage

Completed

Write a description for DTI data collection and parameters, and finalized the L1 version of the method.

Check the methods in children and L2 to make them consistent with L1.

In Progress

Make the demographic template for openfMRI

Make the RBQ template for openfMRI

Work with Anya, make the LHQ template for openfMRI

Following the final recruitment of children, & fill participants' information in children's method

Not yet started

Check with Ben, the directory and the file names of imaging data

Make sure all the directories and file names are consistent with the description methods
